Dictionary

```
ordered, mutable, data type of key value pairs
```

Creating a Dictionary

```
{} curly brackets
    # Data can be anything
    OR
dict() built-in function
```

Dictionary Length

```
len(dict) # Returns the number of key value pairs
```

Accessing Dictionary Items

```
- dict["key"]
    OR
- dict["key1"]["key2"]
    OR
- dict["key1"][index]
    # All will raise errors if not found
    OR
- by get method
    dict.get("key") # Returns None is not found
```

Adding Items to Dictionary

```
dict["key"] = value
```

Modifying Items in a Dictionary

```
dict["key"] = value
```

Checking Keys in a Dictionary

```
"key" in dict -> True/False
```

Removing Key Value Pairs

```
- .pop("key")
- .popitem() -> remove the last item
- del dict["key"]
```

Change Dictionary to List of Tuples

```
dict.items()
```

Dictionary Keys and Values as a List

```
dict.keys()
dict.values()
```

Delete a Dictionary

```
del dict
```

Copy a Dictionary

```
dict_copy = dict.copy()
```
