Try and Except

```
use it for a graceful exit, prevent application from crashing
```

```
try:
    code #run this
except:
    code #execute when there's exception
else:
    code #no exception run this
finally:
    code #always run this

# additional info
except Exception as e:
    print(type(e).__name__, e)
    # print the error type and the error message
```

Packing and Unpacking Arguments

| Unpacking

```
* for lists and tuples
** for dicitonaries

print(sum_of_five_numbers(*list))
args = (2, 5)
range(*args)

print(unpacking_person_info(**dict))
```

| Packing

```
def sum_all(*args):
def packing_person_info(**kwargs): #keyword arguments
```

Spreading

```
unpack values from a collection to another structure or function
```

```
list1 = []
list2 = []
```

```
list3 = [*list1, *list2]
```

Enumerate

```
to get the index of each item in the list
```

```
for index, item in enumerate("chicken", "pasta"):
    print(index, item)
```

Zip

```
combine lists when looping through them
```

```
fruits = ["apple", "orange"]
colors = ["red", "orange"]

for f, c in zip(fruits, colors):
    fruitscolor.append(c+f)
```
