Functions (Built-in or Custom)

```
reusable blocks of code or programme statements designed to perform a
certain task
```

Declare and Calling a Function

```
Make a function == Declare a function
Using the function = Calling or Invoking the function
```

Function Returning a Value

```
def function(parameter:optional):
    return value1 #default is None
```

Function with Parameters

```
- single parameter
    def function(parameter):
- multiple parameters
    def function(para1, para2)
    arg1, arg2
```

Arbitrary Number of Arguments

```
def function(*args):
    # use this if you don't know how many arguments will be there
```
