Benefits of Setting Up Virtual Environment

```
permanent, stays until file is deleted
```

they don't make the program faster but,
1. Dependency Isolation
a project needs only specific package, prevent conflict
2. Reproducibility
"These package make my project work"
Professional Practice
3. Clean Development
use only what you need

Install and Activate Virtual Environment

```
#install
    pip install virtualenv

#create virtualenv
#WINDOW
    python -m venv project_name

#check if installed
    ls / dir

#activate
#WINDOWS POWERSHELL
    venv\Scripts\activate
#WINDOWS GIT BASH
    venv\Scripts\.activate

#QUICK NOTICE
#you can create the virtualenv anywhere, but activate it in the right place

#check available package
    pip freeze

#finish and deactivate
    deactivate
```
