Web Scraping

```
- it is the process of extracting and collecting data from websites and
storing it on local machine or database
- by beautifulsoup and requests package
- need understanding of HTML tags and CSS Selector
```

Beautiful Soup

```
import requests
from bs4 import BeautifulSoup
url = ""
response = requests.get(url)

# IF WEBSITE BLOCK REQUESTS THAT LOOK LIKE BOTS
url = ""
headers = {
    "user-agent": "Mozilla/5.0"
}
response = requests.get(url, headers=headers)

#continue
content = response.content
soup = BeautifulSoup(content, "html.parser")
soup.title
soup.title.get_text()
soup.body
```

| Attributes

```
soup.find_all("table", {"attribute1": " "})

for td in table.find("tr").find_all("td"):
    print(td.text)
```

| Classes

```
soup.find_all("table", class_=True)
#OR
soup.find_all("table", "class":"name")
#OR
soup.find_all("table", class_="name")
```

```
#OR
soup.find_all("table", class_=["name1", "name2"]
```

| Ids

```
soup.find("table", id="mainTable")
#OR
soup.find("table", "id"="mainTable")
#OR
soup.find("table", id=True)
```
